DETAILED ACTION

Claims 1-33 have been cancelled by Applicant, Claims 34-42 are pending in the Application.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 34-36 and 42, drawn to a compositions comprising at least two immunogenic ligands (e.g.- SEQ ID NO:3 and SEQ ID NO:5) and a method of inducing an immune response using said compositions, classified in class 530, subclass 300, for example.
- II. Claims 37-41, drawn to a host cell comprising at least two immunogenic ligands (e.g.- SEQ ID NO:3 and SEQ ID NO:5) and compositions comprising said host cell, classified in class 435, subclass 325, for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions Invention I is drawn to polypeptide compositions and Invention II is drawn to host cells.

Although both inventions recite use of the same the same sequence identifiers, Inventions I and II use them in materially different ways. Invention I uses the

Art Unit: 1654

polypeptides in their independent state as part of a composition, while Invention II uses said polypeptides as a functional part of a host cell composition.

Because Inventions I and II have acquired a separate status in the art as a separate subject for inventive effect, they require independent searches (as indicated by the different classification). The search for each of the above inventions is not co-extensive particularly with regard to the literature search. Further, a reference which would anticipate the invention of one group would not necessarily anticipate or even make obvious another group. Finally, the consideration for patentability is different in each case. Thus, it would be an undue burden to examine all of the above inventions in one application.

Because these inventions are distinct for the reasons given above, have acquired a separate status in the art as shown by their different classification, and the search required for Invention I is not required for Invention II, restriction for examination purposes as indicated is proper.
